

WHAT AN INGENIOUS IDEA

Shower water to sewer,
Clean rainwater to the
storm drain

ONE DESIGN, TWO PROBLEMS SOLVED

Sewer plants are designed to
treat showerwater, washwater,
wastewater and sewage.

Sewer plants are not designed
for and do not want to treat
clean rainwater.

Wastewater diversion systems of
Mechanicsville, Virginia
designed and built a product
that will keep shower/washwater
out of California and Hawaii's
waterways and keep clean water
out of the local sewage
treatment plant.

Our USA built diversion systems
are designed to automatically
send all sources of washwater to
the sewer plant and
automatically send clean
rainwater to the storm drain.
